#5

My code/project is broken.

WHAT'S HAPPENING?

Something changed, and now it doesn't work. Broken is normal. Real builders spend most of their time right here.

TRY THIS

1. **Copy the exact error** (or take a screenshot).
2. **Paste to AI:** "This worked until I ___. Now I see: [error]. Here's my code: [code]. What's wrong? Explain it like I'm new."
3. **Change one thing at a time.** Test after each change.

STILL STUCK?

Go back in time: ask your AI to go back to the last version that worked. Or explain your code line by line to a teammate (or a rubber duck). Saying it out loud finds bugs.

NEXT STEP

Flag a facilitator. Show them: what you expected, what happened, and the error.
